

Minhua Chen

**Department of Ultrasonography, Peking University Cancer Hospital
Chinese Mainland**

She was the pioneer to use ultrasound contrast agent in early diagnosis of hepatic cancers in liver cirrhosis in China and made great contribution to set up international guideline and diagnostic criteria to use contrast enhanced ultrasound. In addition, she has performed radiofrequency ablation of hepatic malignancies since 1999 and first proposed the standardized and individualized strategies of RFA treatment, and developed several new technologies on RFA to deal with difficult cases. Her work helps to improve China's international status of diagnosis and local ablation of liver tumors.
