## **Pat Fox Fulgham**, MD, DABU, FACS

**Chairman, Department of Urology at Texas Health Presbyterian Hospital of Dallas**  
**Clinical Associate Professor, Urology at the University of Texas Southwestern Medical School**  
**United States**

---

Dr. Pat Fulgham is a board certified urologist who has been in private practice at Texas Health Presbyterian Hospital of Dallas since 1987. He is Chairman of the Department of Urology at Texas Health Presbyterian Hospital of Dallas and is a Clinical Associate Professor of Urology at the University of Texas Southwestern Medical School. Dr Fulgham graduated from Texas A&M University and received his medical training and urology residency at the University of Texas Southwestern Medical School.

Dr. Fulgham has been performing and interpreting urologic ultrasound since 1986. In 1993, he began teaching post graduate courses in urologic ultrasound for the American Urological Association (AUA) Office of Education and has been continuously teaching physicians and residents the fundamentals and clinical use of urologic ultrasound since that time.

He was a charter member of the Urologic Diagnostic and Therapeutic Imaging Committee (UDTIC) of the American Urological Association and was chairman of that committee from 2008 to 2016. During that time, he established the National Urologic Ultrasound Faculty, a group of dedicated clinicians and instructors of ultrasound. Among the accomplishments of that group was the production of enduring educational materials in the form of training videos for the performance of all of the commonly performed examinations in urologic ultrasound. In addition, the UDTIC worked with the American Institute of Ultrasound in Medicine (AIUM) to write and publish the AIUM Practice Guidelines for the Performance of an Ultrasound Examination in the Practice of Urology.

Dr. Fulgham has been deeply involved in the ongoing development of ultrasound and the

appropriate use of advanced imaging in the practice of urology. He has been the AUA's representative to the American College of Radiology (ACR) Appropriateness Criteria® Committee since June 2006. He has also participated in the development of protocols for the AUA on the appropriate use of multiple forms of imaging (i.e. ultrasound, CT and MRI) in the management of ureteral calculus disease as well as the appropriate use of MRI and ultrasound in the management of prostate disease.

He was an invited editor for *Urology Clinics of North America* on the topic of urologic imaging in 2006. He is the co-editor of *Practical Urological Ultrasound* published in 2016. He has contributed chapters on imaging in multiple publications including *Campbell-Walsh Urology* (Editions 10 and 11), *Pelvic Floor Ultrasound: Principles, Applications, and Case Studies*, *Prostate Ultrasound: Current Practices and Future Directions* and *Ultrasound of the Male Genitalia*.
