President, Taiwan Society of Perinatology

Treasurer, The Federation of Asia and Oceania Perinatal Societies

In the major of academic life, I am proud of the development of Down syndrome screening in Taiwan to remarkable reduce live born of Down syndrome newborn. There are three steps of Down syndrome screening in Taiwan, the first step is the serum screening using serum markers of AFP & hCG for universal screening in Taiwan which leading by Prof Hsieh Fon Jou. The second step is fetal nuchal translucency (NT) screening during the period of as a President of Taiwan Society of Perinatology. The third step is noninvasive screening (NIPT) which is going on and need further authorized and regulation. The final goal is to reduce the congenital anomaly for our population in the future.
